Lately I have a lot of questions about how to install Forge Modloader for Windows, so I decided to write an installation guide. The purpose of this guide is to make it thorough so that it works in different situations.

PrerequisitesThe latest executable files of MinecraftWinRAR1. Select a versionBefore downloading the installation files, you need to consider which version you want to download, as there are many options. Also pay attention to the Minecraft version for which you are downloading. There are two main types of installation files. The SRC package and the universal package. The src package is used by Mod developers, so we will choose the universal package. If you already know which Mod you want to install, you can search for a forge version number on the Mod page. The publisher may or may not have put it there. Otherwise I will select the recommended version.2. Download installation filesOfficial website for downloading minecraft forge installation files is located at: the top you will find the latest and recommended versions. Below is the full list of all available versions. Select the universal connection of the version you want to install. You will be redirected to the Adfly website. You'll have to wait a few seconds. Click in the upper-right corner of the SKIP AD button screen after the counter is finished. The download will begin.3. CleanThis step is most important in my opinion, but not necessarily. If my Forge Modloader failed to install, the reason was always that I did not clean. Cleaning will make sure that the Minecraft installation is up to date and fresh. Follow these steps to clean up: Press Win + R. Type % appdata % and press enter. If it exists, copy the .minecraft folder to your desktop. If it doesn't exist, go to 4. Install.Remove the .minecraft folder from the %appdata% folder. Start Minecraft.exe and wait until the update is complete and reach Main Menu.Quit Minecraft If they exist, copy the folders saved and

texturepacks and file servers.dat from the .minecraft folder that is located on your desktop in the .minecraft folder that was created by Minecraft in the %appdata% folder. Run Minecraft to see if it works properly. If this happens, exit Minecraft to continue installation.4. InstallationFollow these steps to install Forge Modloader:Open the downloaded ZIP archive containing Forge Modloader in WinRAR.Open %appdata%\.minecraft\bin\minecraft.jar in winrar.Delete the meta-INF folder from minecraft.jar. Copy all files and folders from the Forge Modloader ZIP ARCHIVE Archive. If necessary, overwrite. That's it! Forge Modloader is installed now. Start Minecraft and Forge will start automatically from now.5.
